PROFESSIONAL SUMMARY

AI/ML Engineer with 1+ year of industry experience in production Python automation, coming from network operations. At SDC Tech Solutions, built a Zabbix API reporting pipeline that cut manual reporting effort by **80% across 7 enterprise sites**, now rebuilt as an open-source system with a FastAPI backend, web dashboard, automated accuracy checks and CI. Applies machine learning to classification, regression and statistical problems with measured results. Currently building DocuMind, a RAG-based AI copilot for IT operations.

TECHNICAL SKILLS

Languages	Python, SQL
Machine Learning	Scikit-learn, XGBoost, Regression, Classification, Ensemble Methods (Random Forest, Gradient Boosting), Feature Engineering, Model Evaluation
Statistics	Hypothesis Testing (t-test, ANOVA, Chi-square), Confidence Intervals, Central Limit Theorem
Backend & DevOps	FastAPI, REST APIs, Docker, Git, GitHub Actions (CI), pytest
Data & Automation	Pandas, NumPy, Matplotlib, Seaborn, Excel (OpenPyXL), Selenium
Monitoring	Zabbix API, FortiGate, WAN Utilization Monitoring, Threshold Alerting

PROFESSIONAL EXPERIENCE

Junior Network & Automation Engineer (Python Automation) *SDC Tech Solutions* **Feb 2025 – Mar 2026**

- Built a Python pipeline that pulls bandwidth-utilization data via the Zabbix API and Selenium and generates daily Excel reports, reducing manual reporting effort by **80% across 7 enterprise sites**.
- Automated threshold monitoring of primary and secondary WAN links, counting minutes above 70/80/90% and triggering FortiGate top-talker captures for congested sites.
- Added accuracy checks that reconcile raw Zabbix exports against API data, making daily reports consistent and auditable for the operations team.

PROJECTS

Network Utilization Automation *Python, FastAPI, Zabbix API, Docker, GitHub Actions* [Live demo](#) | [Code](#)

- Rebuilt my production reporting pipeline as an open-source tool that collects per-minute link data, detects 70/80/90% breach periods, and exports an Excel report and a ready-to-send team message.
- Added a FastAPI backend and web dashboard with live pipeline progress and run history; a built-in traffic simulator lets anyone run it without network access.
- Wrote 5 automated accuracy checks and a 21-test pytest suite running on GitHub Actions CI; packaged with Docker.

Driver Attrition Prediction *Python, Scikit-learn, XGBoost* [Code](#)

- Predicted which ride-hailing drivers would leave using Random Forest and XGBoost on 2,381 drivers, reaching **ROC-AUC 0.84** and catching 92% of drivers who left; used KNN imputation and driver-level feature aggregation.

Graduate Admission Prediction *Python, Scikit-learn* [Code](#)

- Built a linear regression model predicting admission chances from GRE, TOEFL, CGPA and research experience, reaching **R² 0.82** (RMSE 0.061).

Logistics Delivery-Time Features *Python, Pandas, NumPy* [Code](#)

- Engineered delivery-time and efficiency features from raw trip data, comparing actual time and distance against route-engine (OSRM) estimates to reveal delay patterns.

Statistical Analysis & SQL *Python, SciPy, Statsmodels, SQL* [E-bike demand](#) | [Spending](#) | [SQL](#)

- Tested demand drivers for shared e-bikes (t-test, ANOVA, chi-square on 10,886 rides), estimated customer spending gaps with 95% confidence intervals on 550,068 purchases, and analysed e-commerce orders in SQL.

EDUCATION & TRAINING

B.Tech, Computer Science Engineering (AI & ML) *Sandip University* | CGPA 8.4/10 **2023**

Full Stack Data Science & AI Engineering *Scaler Academy* **Jul 2023 – Jul 2025**

Module certifications: Computer Vision, NLP, Advanced ML, Time Series & Recommender Systems, Maths for ML, Data Analytics

HSC (12th, Science): 60.0% (2019) | SSC (10th): 84.2% (2017)
